4 Courses

Introduction to VueJS Framework

Software Security for Web Applications

Data Security for Web Developers

Angular for Front End Engineers

Apr 29, 2024

LOGESH P

has successfully completed the online, non-credit Specialization

Web Technologies and Security

This specialization is intended for people without programming experience with JavaScript frameworks and who seek to develop web application and security skills. In these four courses, you will cover everything from the fundamentals of VueJS to properly securing data in web development. These topics will help prepare you to write anything from small web applications to securing back-end systems. Learners who complete this specialization should have enough enough understanding of JavaScript frameworks to tackle other common tools like React or Svelte.
